

**MET's Institute of Technology (P) (B.Tech.)**

## **Institution's Innovation Council**

### **ACTIVITY REPORT**

**Name of Program:** Smart India Hackathon – Role of Institution's Innovation Council (IIC) in encouraging and guiding students on how to develop feasible solutions for a practical issue.

**Level no 4 & Level name:** Hackathons

**Duration:** 2 Days

**Start Date:** 09/9/24

**End Date:** 10/9/24

**No. of Students:** 56

**No. External Participants:** 15

**Expenditure, if any :** 0

**No. of Faculty (Jury Members):** 5

**Details of the Program (80 words):** The Department of Computer Science and Design at MET's Institute of Technology (B.Tech.) organized the 2-day Smart India Hackathon event, which saw participation from students across all departments, including diploma students. The event encouraged participants to present innovative ideas and solutions to real-world problem statements, with the objective of finding practical, technology-driven solutions.

The role of Institution's Innovation Council (IIC) was crucial in this event, as it served as a guiding body for students, encouraging innovation and providing mentorship throughout the process. IIC played a significant role in organizing the event, facilitating teamwork, and ensuring that students approached the problem statements with creativity and a focus on real-world applications.

#### **Day 1: Idea Presentation and Jury Selection**

On the first day, student teams presented their solutions to the problem statements. The participants showcased their innovative ideas, addressing diverse challenges and demonstrating their technical and creative abilities. Students from departments like Computer Science, Electronics, Mechanical, and the diploma programs collaborated, offering a multidisciplinary approach to problem-solving.

#### **Jury Panel:**

A panel of experienced judges, including faculty members and industry professionals, evaluated the student presentations. The ideas were assessed based on:

- **Innovation:** Originality and creativity in approaching the problem.
- **Feasibility:** Practical application and viability of the solution.
- **Impact:** Potential to address the problem effectively and create value.
- **Technical Execution:** The use of technology and the soundness of the proposed solution.

By the end of Day 1, several teams were shortlisted for the final round based on the jury's assessment.

## Day 2: Final Presentations and Prototyping

On Day 2, shortlisted teams presented refined versions of their solutions, incorporating the feedback from the jury. Some teams even showcased working prototypes or demonstrated the technical feasibility of their ideas. The final round allowed teams to present in greater detail, offering a glimpse into the potential real-world impact of their solutions.

The jury selected the top-performing teams, recognizing their innovation and potential to develop their ideas further. These students were encouraged to continue refining their projects with support from the Institution's Innovation Council (IIC) and faculty mentors.

### Role of IIC in Innovation:

The Institution's Innovation Council (IIC) played a critical role throughout the event by:

- Providing Mentorship: IIC guided students in refining their ideas and helped them approach problem-solving with an innovative mindset.
- Promoting Cross-Department Collaboration: Encouraging students from different departments to work together, enhancing the innovation process by bringing diverse perspectives.
- Fostering Entrepreneurship: Motivating students to not only solve problems but also to think about potential start-up opportunities and how their ideas could be turned into viable business solutions.

### Program Objective Achievement
